

Powder Puff Plant

Plant Botanical Name:

Calliandra emarginata

USBG Plant Location:

Conservatory

Sunlight:

Full sun to part shade

Plant Soil Type:

Adaptable to any well drained soil

Plant Moisture Requirements:

Drought tolerant

This bean relative is native to Meso and South America and flowers over a long season on its new growth. Grown out of doors in Florida and along the Gulf Coast, it can be killed to the ground during a cold winter and will not flower until late summer or fall.
