What's happening in Bartholdi Park?

10/12/2016 UPDATE: As 2016 draws to a close, exciting changes will start to emerge from behind the fencing at Bartholdi Park. In the coming weeks, the fence will be removed. Visitors can expect rolling closures at the park's access points as the project continues. Once the project is complete, full details about the Bar will be posted to this page.

Originally created in 1932, when the U.S. Botanic Garden (USBG) was moved to its current location, Bartholdi Park has served as a two-acre home demonstration garden for over 80 years, but has not undergone a comprehensive renovation since its construction.

The USBG and the Architect of the Capitol are renovating the park to include accessible pathways, improved access to the American Veterans Disabled Center, and increased safety via new lighting, improved stormwater collection, updated irrigation, new plantings, and restoration of the historic small fountain at the north end of the park.

Bartholdi Park will continue to have demonstration and educational gardens, featuring additional seating, American native plants, patio gardens, rain gardens, and accessible gardening areas. Many of the larger woody plants are being saved in place and much of the removed plant material will be used elsewhere at the grounds of the Library of Congress, the Supreme Court of the United States, and D.C. public schools.

Pedestrians walking along the exterior sidewalks will be unaffected, with the exception of a brief closure of a small section of sidewalk along Washington Boulevard and Independence Ave. SW.

The public can view progress of the renovation through construction fence windows and from across the street on the canopy walkway in The Tropics room. We look forward to welcoming you to the renovated Bartholdi Park in 2016!

Just across Independence Avenue from the U.S. Botanic Garden Conservatory is a favorite "secret" garden of many Washingtonians. Bartholdi Park is a demonstration garden that showcases innovative plant combinations in a variety of styles and design themes.

It serves as a demonstration garden where visitors can learn to apply the latest horticultural techniques to their home landscapes. The plantings are composed of new varieties, design trends and garden maintenance methods.

In warm weather, enjoy the centerpiece of the Park, the *Fountain of Light and Water*, commonly called the Bartholdi Fountain. This cast-iron fountain was designed by Frederick Law Olmsted and stands 30 feet tall. The lights surrounding its basin are illuminated at night.

Bartholdi Park is a refuge from the stresses of the city. Secluded benches offer quiet shade in the summer and sheltered sunlight in the winter. Every type of plant is featured in the Park - deciduous trees, evergreens, shrubs, perennials, annuals, vines, ground covers, roses and bulbs. In every season, the colors and textures of the plants are exhilarating.

Bartholdi Park is being redesigned as a Sustainable Sites Initiative(™) pilot project. It will include a demonstration garden for homeowners. The focus will be on

styles and plant options that all can be achieved using SITES guidelines. Each demonstration will be a synergistic solution for dynamic and holistic systems for the home gardener, helping improve garden design and maintenance practices nationwide.
