

White Japanese anemone

Plant Botanical Name:

Anemone x hybrida

Plant Sub Species or Variety:

'Honorine Jobert'

USBG Plant Location:

Conservatory

Sunlight:

Part shade to full sun

Plant Soil Type:

Average garden soil

Plant Moisture Requirements:

Medium, although prefers consistent moisture

Anemone x hybrida 'Honorine Jobert' is an outstanding garden plant for the Mid-Atlantic region. It is an old garden hybrid and is sometimes sold as *Anemone Jobert* or *A. x hybrida* 'Alba.' Once established, it is relatively low maintenance and has showy white flowers from August through frost. When grown in g protected from hot dry conditions and afternoon summer sun, it should eventually naturalize and spread into colonies up to two feet across. It does not p soils or particularly excessive winter dampness.
