

Production Facility Virtual Open House

March 1-7, 2021

Join us for a week-long celebration of our Production Facility this year as our Open House goes online! Throughout the week of March 1-7, we'll be sharing behind-the-scenes videos from our Horticulture team, and then we'll cap the week off with two live Question and Answer programs on Saturday, March 6.

Live Programs

Register for the two interactive Question and Answer programs:

- March 6 - Online Q&A: Plant Health Care for the Home Grower (Production Facility Virtual Open House)
- March 6 - Online Q&A: Orchid Care for the Home Grower (Production Facility Virtual Open House)
-

Behind-the-Scenes Videos:

We will post behind-the-scenes videos daily the week of March 1, 2021. Watch the latest here, and click the playlist in the video's upper right corner to see all the videos. You can also see the full playlist here.

About the U.S. Botanic Garden Production Facility

Greenhouses to shelter and propagate plants have been part of the U.S. Botanic Garden since the 1850s.

Our Production Facility is the largest greenhouse complex supporting a public garden in the United States. The greenhouse, completed in 1993, includes 34 glass bays divided into 34 greenhouse bays and 17 environmental zones. Its computerized environmental controls provide the flexibility to grow a wide variety of plants.

The Production Facility supports foliage, nursery crops and seasonal displays and exhibits. In addition, it contains all of the U.S. Botanic Garden collection including orchids, medicinal plants, insectivorous plants and rare and endangered species.
