

Santa Barbara Cymbidium

Plant Botanical Name:

Cymbidium

Plant Sub Species or Variety:

Pebbles 'Santa Barbara'

USBG Plant Location:

Conservatory

Conservatory Room Location:

Garden Court

Cymbidium orchids are typically easy to grow and produce an abundance of flowers on each spike. They perform best with indirect filtered sunlight, which produces light green foliage instead of deep green. They should be kept moist and fertilized with a high nitrogen fertilizer from July through November and a lower nitrogen fertilizer from December through June. Slow release fertilizer could be applied in the fall and mid-spring.
