

Canary bird flower maple

Plant Botanical Name:

Abutilon

Plant Sub Species or Variety:

'Canary Bird'

USBG Plant Location:

Conservatory

Conservatory Room Location:

Plant Exploration

Sunlight:

Full Sun to light shade

Plant Soil Type:

Moist, well-drained sandy loam

Hardy only into the teens, so it is best overwintered in a protected area in the Washington area. It starts flowering in early summer and blooms until the fall. It is a hummingbird plant with large yellow flowers that hang downward like a bell. It is relatively easy to propagate from softwood cuttings taken in the spring.
