

Scarlet rosemallow

Plant Botanical Name:

Hibiscus coccineus

USBG Plant Location:

Conservatory

Conservatory Room Location:

Conservatory Terrace

Sunlight:

Full sun to part shade

Plant Soil Type:

Most garden soil

Plant Moisture Requirements:

Medium to wet

Sometimes called swamp hibiscus as is native to swamps and marshes in Alabama, Georgia and Florida, it is a vigorous woody perennial with showy red flowers. From mid summer through fall this is a great addition to a border planting or wet area. The flowers attract butterflies and hummingbirds and deer do not eat it.
