Weeds

DID YOU KNOW?
Weeds are plants growing where they are not wanted. They can quickly grow and take over bare patches of soil. Weed seeds can be buried in the soil for many years. When they are uncovered, they can still sprout and grow.

Weeds Are Hardy
Most weeds can grow very rapidly, and they can grow in many different places.
WEED LIFE CYCLES
Annual weeds complete their life cycle in a single season.

Seeds of annuals sprout and grow into mature plants. After making seeds, the plants die.

Biennial weeds live for two growing seasons.

During the first growing season, they make food that is stored in their underground stems or roots. In the second season, they use the stored food to make flowers and seeds.

Perennial weeds live year to year.

Perennials die to the ground each growing season. But their underground roots or stems stay alive and send up new shoots at the start of each growing season.

WEED SEEDS
Most weeds make lots of seeds. Weeds also have unique ways to spread their seeds.

Dandelion seeds have parachutes that float in the wind.

Burdock seeds hitch a ride on fur and clothing.

WEEDS GROW FROM PLANT PARTS
Many weeds can also sprout from roots, stems, or leaves.

Field bindweed grows lots of roots. New plants sprout up from the roots.

A small piece of stem or leaf of common purslane can grow into a new plant.

WEEDS CAN BE FRIENDS...
While weeds can become pests in fields, lawns, and gardens, they can also be useful. They can be used as food or medicine for humans and animals. They can protect and improve the soil. They can also be beautiful to look at!

Many weeds, such as comfrey, have been used as food and medicine for hundreds of years.

Deep-rooted weeds can bring up nutrients from deep in the soil. When they die, weeds add organic matter to the soil.

...AND CAN BE FOES!
It can be difficult to get rid of weeds, especially in areas where humans have disturbed the soil. Weeds can reduce crop yield in fields and gardens.

Weeds quickly sprout and grow on bare soil, and keep it from washing or blowing away.

Where did all these weeds come from?

common lambsquarters

burdock

gill-over-the-ground

bugleflower

dandelion

clickory

Weeds compete with crops for space, water, sunlight, and nutrients.
